Enter the details for your network account and email address as shown below, details can be found at the end of this document.

Once completed the select the Next Button to validate the details of the account, the iPad will then attempt a connection to the mail server to check the details are correct.

If unable to automatically resolve the details the iPad may ask for your mail server name, the standard syntax is as follows.

Server	maii.araturacioud.com.au	
--------	--------------------------	--

The settings should all now be entered as follows, hit the next button to finish the configuration.

In some cases the SSL Feature may need to be disabled to access email.

This setting can only be accessed once the account is setup, the setup process may fail as SSL is enabled by default, if this is the case you will prompted to save the settings.

You can then edit the account settings to turn off the SSL feature.

Select "Advanced Settings"
