**Citrix Receiver iPad Setup Guide**

**Arafura Cloud**

The first step is to install the application onto the iPad, then the configuration of the connection to the corporate servers will be undertaken.
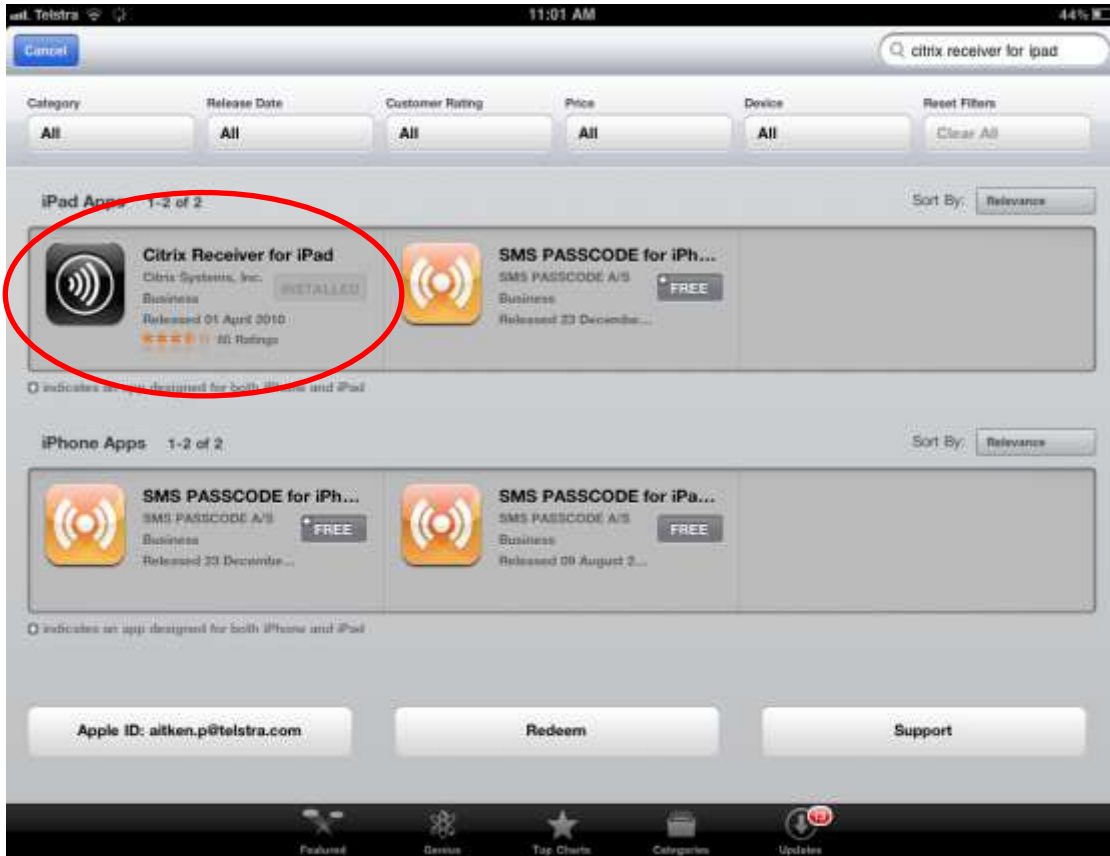

To carry out the installation of the Citrix Receiver you must already have setup a Apple itunes Account or have access to one to allow the application to be downloaded. The application is free of charge.

Once you have setup your Apple ID onto the device locate and select the App Store Icon as shown below.

In the search box type Citrix Receiver, once located Select Citrix Receiver for iPad to be installed.

Select the Free button, this will change to an Install button, select the Install button and enter your iTunes account details to install. Once downloaded the application will then install itself onto the iPad as shown below.
Once installed, select the Citrix Receiver App on your Home Screen.

The following screen will appear, select the Get Started option under Set up my enterprise app store.

In the Address box type https://desktop.arafuracloud.com.au and then select the Next Button

The Description and Domain boxes should have text automatically appear in them, if they don't enter the information showed in the above picture.

Enter your username and password that is used to login to the Citrix Portal.

Select the Save Button to retain the settings.

Once completed you can then logon to the Citrix Portal, your published applications will then be available, from here select the application you required, the iPad will launch the program, the speed of the service will depend on your connection method to the internet.

Once completed logoff or close the application and hit the home button in the iPad to return to the home navigation screen.
